

# Do you judge a Server by its Cover?

## Do you want:

A server that harnesses the power of Xeon Intel processors to **catapult performance** and **productivity into overdrive** while remaining flexible enough to let you **choose your own OS**?

A server with **In-Band / Out-of-Band Remote Hardware Management** for heads-up alerts on small issues before they escalate into time consuming downtime?

A server that **saves you money** by maximizing your uptime by performing to your exact specifications because it has been **hand tested by certified technicians** before leaving the factory?

A server that **saves space** while remaining ready to **expand** when your business is ready to **grow**.

**Designed for Performance. Customized to Serve. Build to Last.**
